

Building Sustainable Living Communities in Egypt's South Sinai

Building Sustainable Living Community Experiences in Egypt's South Sinai

Mimicing nature in evolving human communities & connections

Sustainable, Tech-friendly, Boundaries, Fair-play

Built by Dahab Innovation Labs led by EGYPRENEUR

With the evolution of remote work and the ability for owners, executives, and professionals to work remotely, the need for a conscious living experience/decision has evolved.

Egypt's south Sinai has witnessed an evolving trend of naturally forming human communities especially in cities like Dahab where an international network of locals, healing / conscious living practitioners, and professional remote workers live together and shape each other's experience of the city.

The messy nature of natural forming clouds the presence of a beautiful experience, friendly to the culture and traditions of the local populations, and fulfilling the expectations and aspirations of medium and long term visitors.

Beyond contributing to a "tourism cycle", the relocation of working professionals activates economic activities in the domain of technology startups and digital services, making Dahab a perfect hub for like-minded professionals and offering the clarity of thought and affordable cost of living and execution of various future-tech projects.

Private sector entities are launched to manage and moderate parts of the living experience of a newly forming community, founded around "Radical Honesty", the community explores the agreeable forms of sharing and relating experience to one another.

What makes an outstanding living community experience?

How long does the living experience last?

- ***Securing land***
 - ***Ground***
 - ***Water***
 - ***Radiation***
 - ***Vibration***

- **Securing designs and architecture**
- **Securing important units (solar heaters, sewage systems, drinking water, transportation)**
- **Verifying the economic viability of building through pre-sales and pre-orders**
- **THE BRANDING “naturally designed living community” mimicking nature...**
- **The construction contractor**
- **The maintenance, security, cultural affairs, and caregivers**
- **Core services (Internet, TV, Delivery, Concierge)**
- **Programs, activities and verification papers for business units**
- **Relying on existing, dynamically evolving infrastructure**

Phase #0:

Remote-equipped living units and experiences

Phase #1:

Wifi as a Service

Phase #2:

Real estate acquisition

Acquiring long term rental contracts for a series of properties in specific locations and with specific living standard

Phase #3:

Culture and behavior

Phase #4

Holistic Integration
